

Phone Intelligence API

Get detailed and authoritative phone data to help identify fake account sign-ups, inform risk models, and segment and analyze databases.

Features

Validity checks

Shows whether a number is valid and assigned to a carrier.

Line type

Provides 7 unique line types including mobile, fixed and non-fixed VoIP, landline, premium, toll-free, and voicemail service.

Carrier

Identifies over 3000 carriers including ones often associated with fraudulent activity.

Prepaid status

Indicates whether a mobile number is part of a pre-paid plan, which can be a positive signal or a risk signal, depending on your business.

Country code

Indicates the phone number's country of origin.

Business Benefits

Mitigate risk and fraud

Identify fake user account sign-ups and inform risk models with authoritative phone data.

Improve conversions

Append and validate contact records and leads for better conversion rates.

Prioritize and convert

Increase conversions and right party contact while staying compliant with accurate phone data.

Simple Access

Enterprise-grade API

Speed, simplicity, and scale via our RESTful API.

Partners

Easily access our data via key partners.

Whitepages Pro is international

We have data for every country in the world.

Phone Intelligence API Attributes

Valid or invalid

Indicates whether the phone number is a real phone number with a valid area code.

Line type

Indicates whether a number is a landline, mobile, fixed or non-fixed VoIP (including Google Voice or Skype), premium number, a toll-free number, or voicemail-only service.

Carrier

Indicates the company providing service to the associated number, including hard-to-identify carriers such as Boost, Metro PCS, and TracFone.

Prepaid status

Indicates whether a mobile number is part of a prepaid service plan.

Country calling code

International country code (Spec: ITU-T E.164). Example: "1" for USA & Canada.

Country code

International alpha-2 country code. Example: US for United States, DE for Germany.

Full country name

Full human readable country name. Example: United States, Brazil, Mexico.
